As pharmacist should update its knowledge regarding research. So it is necessary to enlighten the concept of digital binocular microscopy specially in Physical Pharmaceutics. - Overview about concept and working of binocular microscopy was provided to all students through practical.

Second Year B. Pharm Sem-IV	Physical Pharmaceutics-II
Experiment no: 12	Date 6/3/19
Aim: Determination of particle size of given sample by Binocular Digital Microscopes.	
Requirements:	
Glassware's: Binocular Digital Microscopes, Pixel Pro software, Laptop, standard stage micrometer scale, glass slide, cover slip etc.	
Chemicals: Powder sample or diluted suspension.	
Procedure for Calibration:	
1. Calibrate the Microscope with software (Pixel Pro) provided using Micrometer Slide (1div= 0.01micron).	
2. Place the Micrometer slide on the Mechanical stage in such a way that the 'Scale' (1div = 0.01micron) image comes under selected objective (e.g. 4x).	
3. Capture image of micrometer slide using software.	
4. In software programme, go to the Calibration Menu. Select Add New option. From that select 4 X objective.	
5. Further go in 'Annotation' mode. From that select 'line option'. Further go in "Calibration" Menu.	
9. Drag the line on selected division of captured micrometer slide.	
10. Add the measurement equivalent to the line drag on micrometer scale (1 division=10 um).	
11. Select the micrometer option. 12. For calibration of 10 x, 40x and 100 x oil immersion lens same procedure has to be followed.	
BASIC OPERATION:	
1. Fix the slide in position on the stage.	
2. Observe the object through eyepiece.	
3. Adjust the intensity of the light by turning the iris diaphragm provided at the base of the instrument.	
4. Turn the illumination control device until the image is illuminated.	
5. Adjust the condenser by raising or lowering it to adjust intensity of light.	
6. If the high power objective is to be used, rotate the nosepiece until the high power objective occupies the position of the low power objective.	
7. Then use the coarse and fine adjustment knobs to focus the object. The light should be adjusted by manipulating the condenser and the diaphragm.	
8. After focusing object sharply, from software, select 'capture' option and get image. Open the image. After that go to the 'Calibration' mode. Select the specific power of objective (e.g. 4x)	
9. Then go to 'Annotation' mode. Select line and drag the line on particle. Actual dimension of line (particle) will appear in Annotation mode.
