(57) Abstract :

The present disclosure relates to an evaluation of novel type of recognitive Tablet-in-tablet-in-tablet of Bicalutamide, Koenimbine and Curcumin for their Pharmacological benefits. In particular, the present disclosure evaluates the effect of novel Tablet-in-tablet-in-tablet of Bicalutamide, Koenimbine and Curcumin in the treatment of prostate cancer by using Different model. In second part, the comparative study between marketed formulation and Tablet-in-tablet-in-tablet of Bicalutamide, Koenimbine and Curcumin done.

(57) Abstract :

The goal of the study is to see if an ethanol extract of Hugoniamystax leaves having anti-ulcer properties. The rat model of acetic acid-induced ulceration is chosen because it is the most appropriate model for evaluating the effect of possible medications or extracts on the healing process of chronic peptic ulcers, as well as for screening for antisecretory and cytoprotective activities. In comparison to the acetic acid-treated rats, administration of the extracts Hugoniamystax and omeprazole (30 mg/kg) resulted in a considerable restoration of reduced GSH levels, suggesting its efficiency in avoiding oxidative stress-induced damage.

(57) Abstract :

In a present invention relates to Rizatriptan Benzoate Loaded Nanostructured Lipid Carriers prepared for the treatment of migraine. The Nanostructured Lipid Carriers (NLCs) are 2nd generation nanoparticles and are prepared by using Modified Solvent diffusion-Ultrasonication Method. The Design-Expert software with Box-Behnken Design used for the optimization of formulation. The excipients used for NLCs preparation are solid lipid (Glyceryl Monostearate), liquid lipid (Olive oil) along with surfactant and co-surfactant (tween 80 & span 80) and ethanol as an organic solvent. Independent variables selected are X1: Concentration of GMS, X2: Concentration of Tween 80 and X3: Sonication time. The optimization batches are prepared and all three responses estimated are Y1: Particle size, Y2: % Entrapment efficiency and Y3: % Drug release. The obtained data analysed for statistical significance through ANOVA and by response surface graphs, the Batch J selected as optimized batch shown particle size 145 nm, % Entrapment Efficiency 82% and % Drug release 79.39 %. The Zeta potential -20.6 mv and PDI 0.324 confirms the stability of NLCs. The DSC and TEM study confirmed the amorphization and molecular solubilization of RB in NLC and spherical shaped NLC observed. The Ex-Vivo permeation study on sheep nasal mucosa confirmed the permeability of drug from nasal mucosa.

(57) Abstract:
[001] The study is disproportionately affected by Alzheimer's disease (AD), a form of dementia. Cognitive decline and memory in Alzheimer's disease associated with time. Recent studies have shown that people with Alzheimer's disease have elevated inflammatory markers, suggesting that inflammation plays a significant role in the onset and progression of the disease. Mitochondrial receptors CD36, CD38, and CD47, and TLRs, may all be able to detect AD oligomers and fibrils. The neurodegenerative process begins when Aβ binds to either CD36 or TLRs, setting off an inflammatory cascade of chemokines and cytokines. TLRs has been implicated in type 2 diabetes and Alzheimer's disease as of late. Several diabetes-related clinical problems, as well as changes in the body's internal environment and the brain's neurochemistry, have been connected to TLRs activation. Clinical trials have demonstrated that TLRs inhibitors not only decrease the likelihood of getting sick but also increase life expectancy. Molecular docking and molecular dynamics simulation were used to examine the effectiveness of anti-diabetic drugs against the TLRs receptor. Potential primary interactions were anticipated with the help of molecular docking investigations. With a binding affinity of -9.6 kcal/mol, it was the most promising of the candidates. The interaction pattern between Puribolol and the TLRs receptor was verified by creating a molecular dynamic simulation at a time scale of 50 nanoseconds. By making substantial contact with the active site, Puribolol entered the complex's structural cavity and was maintained throughout its rapid expansion. In light of these findings, further research into Puribolol's potential as a lead drug for TLRs receptors is warranted. Accompanied Drawing (FIG. 1) (FIG. 2)

(57) Abstract
Computational approaches in altering the inhibition of Acetylcholinesterase Receptor in Alzheimer's disease treatment using Geranylgeraniol Abstract Acetylcholinesterase (AChE) inhibitors have recently become the standard way to treat Alzheimer's disease (AD). By increasing synaptic concentrations of acetylcholine and decreasing acetylcholine turnover, these drugs counteract the effects of the loss of cholinergic neurons. On the other hand, AD has only been linked to AChE in the past few years. In particular, it looks like AChE may have a direct effect on amyloid-beta, causing more of this peptide to build up into hard plaques. This new function makes it more likely that AChE inhibitors, if made carefully, could be used to cure diseases instead of just making people feel better. Several studies have also shown that the cholinergic modulation and other functional effects of AChE inhibition may affect how amyloid precursor protein is processed and protect neurons from different stressors. So, it makes sense that new AChE inhibitors that take advantage of all of these benefits could be useful in the future to treat AD. Molecular docking and molecular dynamics modelling were used to examine the effectiveness of the drugs against AChE receptor. Geranylgeraniol's primary interactions were anticipated with the help of molecular docking investigations. With a binding affinity of -9.7 kcal/mol, it was the most promising of the candidates. By making substantial contact with the active site, Geranylgeraniol ensured the complex's structural integrity was maintained throughout its rapid expansion. In light of these findings, further research into Geranylgeraniol's potential as a lead drug for AChE receptors is warranted.

(57) Abstract :

The present invention is related to the herbal formulation of phyllanthus emblica (amla) and piper betel (betel leaf) in the presence of polymer for the treatment of peptic ulcer and preparation method thereof. The present invention further discloses the said herbal formulation containing fruit extract of phyllanthus emblica (amla) and leaf extract of piper betel (betel leaf). The said herbal formulation has prolonged action with no side-effects

C) Exchange of Faculty and Staff:

KTPCOP, Osmanabad and DYPCOP, Akurdi agree to encourage collaboration between faculties from two institutions. Specifically, institutions will encourage members of their faculties to undertake short visit to, or take up fixed-term visiting assignments at, each other's institutions as per the existing norms.

D) Exchange of Scientific & Technical Material:

KTPCOP, Osmanabad and DYPCOP, Akurdi will exchange technical information on research & educational programmes, teaching / learning material and other literature relevant to their educational and research programmes. Further, KTPCOP, Osmanabad and DYPCOP, Akurdi agree to explore ways to share teaching / learning material and other relevant literature, while respecting each other's intellectual property & other rights.

E) Joint Conferences, Workshops & Short Term Courses:

KTPCOP, Osmanabad and DYPCOP, Akurdi agree to help to identify and invite faculty members from the other institution to participate in conferences, workshops and short term courses. The terms and conditions for such participation will be worked out by prior mutual discussion between KTPCOP, Osmanabad and DYPCOP, Akurdi.

F) Co-ordination:

Each institution shall appoint one member of its teaching / research faculty to co-ordinate programmes on its behalf. Such appointed programme co-ordinator from both sides will periodically review and identify ways to strengthen co-ordination between the two institutions. Details of such co-ordinator shall be informal to both parties such as name, designation / post, mobile number and e-mail ID etc.

G) Tenure and Termination:

This MoU will take effect from the date it is signed by representatives of the two institutions. It will remain valid for five years, and may be continued there after suitable review and agreement. Either institution may terminate the MoU by giving written prior notice to the other institution three months advance. Once terminated, neither KTPCOP, Osmanabad nor DYPCOP, Akurdi will be responsible for any losses, financial or otherwise, which the other institution may suffer. However, KTPCOP, Osmanabad and DYPCOP, Akurdi will ensure that all activities in progress are allowed to complete successfully.

LCOPH and DDYPCOP further agree that detailed terms and conditions that guide each activity identified above will be separately determined and agreed upon by the two institutions. These terms shall include a technical description of the proposed activity, financial arrangements, and person(s) responsible for its implementation, etc.

B. Exchange of Faculty, Scientists and Staff

LCOPH and DDYPCOP agree to encourage collaboration between faculty and scientists from the two institutions. Specifically, institutions will encourage members of their faculties to undertake short visits to, or take up fixed-term visiting assignments at, each other's institution as per the existing norms. Terms and conditions for each visit or an assignment, including those concerning travel, and housing, name of the concerned faculty member will be worked out between LCOPH and DDYPCOP.

C. Exchange of Scientific and Technical Material

LCOPH and DDYPCOP will exchange information on research and educational programmes and teaching/learning material and other literature relevant to their educational and research programmes. Further, LCOPH and DDYPCOP agree to explore ways to share teaching/learning material, and other relevant literature, while respecting each other's intellectual property and other rights.

D. Joint Conferences, workshops and short-term courses

LCOPH and DDYPCOP agree to help identify and invite faculty members from the other institution to participate in conferences, workshops and short-term courses. The terms and conditions for such participation will be worked out by mutual agreement between LCOPH and DDYPCOP.

E. Intellectual Property

LCOPH and DDYPCOP agree to respect each other's rights to intellectual property. Further, the intellectual property rights that arise as a result of any collaborative research or activity under this MoU will be worked out on a case-by-case basis, and will be consistent with the officially laid down IPR policies of the two institutions.

F. Co-ordination

Each institution shall appoint one member of its teaching/research faculty to coordinate the programme on its behalf. Further, a coordination committee, consisting of (a) Principal, LCOPH, or his/her nominee, (b) Principal, DYP COP, or his/her nominee, (c) Programme coordinator from the side of LCOPH, and (d) Programme Coordinator from the side of DYP COP, will periodically review and identify ways to strengthen cooperation between the two institutions.

G. Tenure and Termination

This MoU will take effect from 1st June 2019, the date it is signed by representatives of the two institutions. It will remain valid for five years, and may be continued thereafter after suitable review and agreement. Either institution may terminate the MoU by giving written notice to the other institution six months in advance. Once terminated, neither LCOPH nor DYP COP will be responsible for any losses, or otherwise, which the other institutions may suffer. However, LCOPH and DYP COP will ensure that all activities in progress are allowed to complete successfully

[Back to Summary](#)

THIS MEMORANDUM OF UNDERSTANDING (hereinafter referred to as 'MOU') is made on the 01 day of Jan 2019.

BETWEEN

Modern College of Pharmacy (for ladies), Moshi, Pune (hereinafter referred to as 'MCPL')

And

Pad. Dr. D. Y. Patil College of Pharmacy, Akurdi, Pune (hereinafter referred to as 'DYPCP')

WHEREAS

- A MCPL and DYPCP wish to develop academic exchanges and cooperation in teaching and research in furtherance of the advancement and dissemination of learning.
- B MCPL and DYPCP wish to co-operate to promote, facilitate and implement co-operation in the following programmes and activities.

NOW IT IS HEREBY AGREED AS FOLLOWS:

ARTICLE 1

AREAS OF COOPERATION

MCPL and DYPCP agree to the following goals and objectives in order to initiate the international partnership programme:

- (a) Exchange of scientific, academic, and technical information and appropriate academic materials and other information of mutual interest;
- (b) Academic exchanges, including mutual visits of faculty and school members to pursue research and to lecture, and student exchanges on a reciprocal basis;

[Back to Summary](#)

- (c) Identifying opportunities for exchanges and cooperation and joint research and development in disciplines of mutual interest and;
- (d) Organisation and participation of joint academic and scientific activities such as seminars and conferences.
- (e) The outcome of activity in terms of publications must be acknowledged by both the institute.

ARTICLE 2

AMENDMENTS

This MOU may only be amended by mutual agreement evidenced in writing by a duly authorised representative from each of MCPL and DYPCP.

ARTICLE 3

TERM OF AGREEMENT

This MOU shall commence on the date of its execution by the last two sign of MCPL and DYPCP and shall remain in force for a period of FIVE years and may be renewed upon its expiry and with the agreement of both parties. If the MOU remains dormant for three consecutive years it will be deemed to have lapsed.

Either MCPL or DYPCP may cancel the MOU by giving six months notice in writing to the other. The termination of this MOU shall not affect the implementation of the projects or programmes established under it prior to such termination.

ABSTRACT

A high performance thin layer chromatographic method has been developed for the simultaneous determination of lopinavir and ritonavir from tablet dosage form. Separation was performed on aluminum HPTLC plate (20×10cm) precoated with silica gel F₂₅₄ HPTLC plates as stationary phase and the mobile phase consisting of toluene, ethyl acetate, methanol, formic acid (6:4, 4.5:0.5:0.5v/v/v/v) and wavelength of detection 254nm was used. After development, plates were observed under UV light. The detector response was linear in the range of 2µg/spot - 12µg/spot and 2 µg/spot - 6 µg/spot for lopinavir and ritonavir respectively. The developed method was validated as per ICH guidelines. The validated lowest limit of detection was 0.004827 µg /spot and 0.003369 µg /spot whereas lowest limit of quantification was 0.014627 µg /spot and 0.010208µg /spot for lopinavir and ritonavir respectively. The described method has the advantage of being rapid and easy. Hence it can be applied for routine quality control analysis of lopinavir and ritonavir from pharmaceutical preparation and stability studies.

KEYWORDS: Lopinavir, Ritonavir, HPTLC, Validation.

INTRODUCTION

Lopinavir chemically (2S)-N-[(2S,4S,5S)-5-[2-(2,6dimethylphenoxacetamido)-4-hydroxy-1,6-phenylhexan-2-yl]-3-methyl-2-(2-oxo-1,3-diazinan-1-yl)butanamide and its empirical formula is C₃₇H₄₈N₄O₅ with a molecular weight of 628.80 (figure 1 A) [1-3] and Ritonavir (5s, 8s, 10s,11s)-10-hydroxy-2-methyl-5-(1-methylethyl)-1-[2-(1-methylethyl)-4-thiazolyl]-3,6-dioxo-8,11-is (phenylmethyl)-2,4,7,12-etraazatridecan-13-oic acid 5-thiazolyl methyl ester of molecular formula C₃₇H₄₈N₆O₅S₂ and its molecular weight is 720.95 (figure 1 B). [1-3] These are antiretroviral drugs from protease inhibitor class. The drugs have been proved to be effective in anti-HIV treatment.

Ritonavir is the most potent protease inhibitor in its ability to inhibit CYP-450 and efflux pump-P-

glycoprotein as a result the potential for severe drug interaction is quite great because of strong CYP-450 inhibiting effect of ritonavir. The drug has found value when used in fixed dosage form combination with other PIs to block their metabolism and acts as a booster for these drugs. In these cases ritonavir is used in a sub therapeutic dose but boosts the effectiveness of co administered drug. [4-7]

Literature survey of lopinavir and ritonavir either single or in combination with ritonavir revealed several methods based on HPLC and spectrophotometric methods in pharmaceutical formulation .however there are few HPTLC method for simultaneous determination. The proposed method was validated as per ICH guideline.
